Outline

1. Web Port Open

2. Basic design of processing the Embedded Web Port

1. Web Port Open

To access the Web user interface, you must open the unit's Web port beforehand

In cases when buttons/soft key icons are shown in English alphabet

1. Handset [MENU] (center of joystick) →[Setting Handset]->[Other Option]
   ->[Embedded Web]->[On]->[OK]

2. Basic design of processing the Embedded Web Port

The web port processing is designed based on a company's security policy against IP products.

- The unit will inevitably start to run with the web port closed when it is turned on.

- The web port will be closed automatically in the following conditions:
  -The port close timer configured through the Web user interface expires.
  -3 consecutive unsuccessful login attempts occur.
